## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian W. Hannon on March, 19 2008.

The application as been amended as follows:

#### **Claim 1**

- **Lines 30-31, the recitation of "throttling member" has been changed to --shutter--**
- **Line 32, the recitation of "throttling member" has been changed to --shutter--**
- **Lines 35-36, the recitation of "throttling member" has been changed to "shutter."**

#### **Claim 4**

- **Line 10, the recitation of "said throttling member is a shutter (22) defined by the" has been changed to --said shutter is defined by the--**

#### **Claim 9**

- **Line 5, the recitation of “and with throttling means (22)” has been changed to --and with the respective shutter (22)--**

**Claim 14**

- **Line 16, the recitation of “means.” has been changed to -- means,--**
- **Lines 19, the recitation of “and means for throttling said by-pass conduit” has been changed to --and a shutter (22) for throttling said by-pass conduit--**
- **Line 28-29, the recitation of “and in that said throttling means (22) are constituted by a shutter, mechanically connected to said flow” has been changed to --and said shutter (22) is mechanically connected to said flow--”**

The following is an examiner’s statement of reasons for allowance: The prior art does not teach nor render obvious the limitations in the independent claims, and specifically do not teach: a rocker arm having at least one active portion movable between two operative positions, wherein, the rocker arm motions the active portion pivotally engaging hole to divert airflow in main conduit to a particular outlet, and a shutter mechanically connected to the rocker arm for throttling airflow through the bypass conduit, and therein affecting the outlet temperature that exits the outlet conduits.

The closest prior art of Takahashi (US Patent No. 4,895,000) teaches a vehicle air distribution device having a casing defining a main conduit, a bypass conduit, an inlet conduit, and a plurality of outlet conduits operable via a series of shutters to adjust the airflow leading to each outlet; a heat radiating mass positioned upstream of the main conduit and in parallel to a bypass passageway being throttled to moderate the outlet temperature, but, is silent with respect to a protuberating member used for encouraging a particular outlet flow path and a shutter for throttling the bypass conduit airflow to fine tune the outlet temperature..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph J. Corrigan whose telephone number is 571-270-3213. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisors are Cheryl Tyler or Frantz Jules on (571) 272-4834 or (571) 272-6681, respectively. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
